

Portable Paint Station with modular shelves and storage

You will Need:

The Paint Storage is composed by many carefully packaged pre cut parts.

Use PVA glue on all wood to wood contact surfaces.

Some parts do not require Glue and can be interchaged if needed.

Warning: The wood can warp in transit and dimentions, you should let it rest indoor about 24h before assembly.

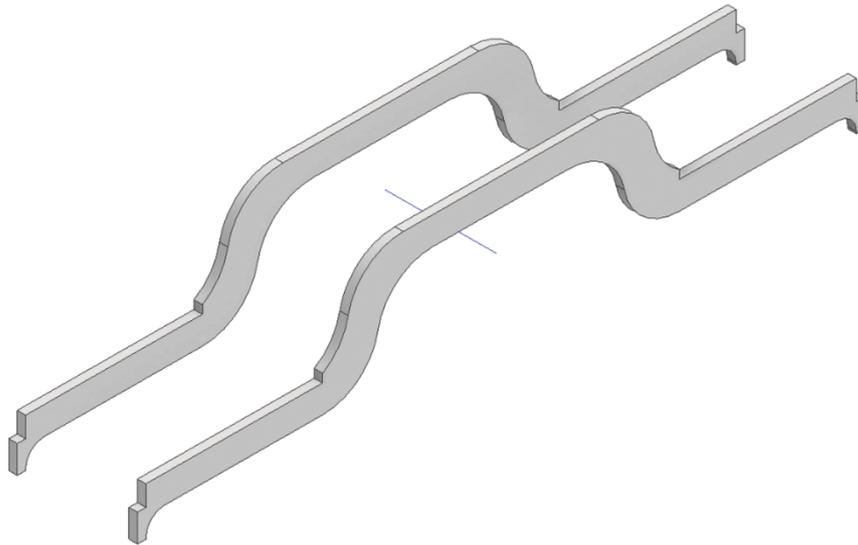

To ensure that all parts fit every assembly step should be assembled without glue, sometimes to ensure a perfect fit some tabs or corners might need to be filled.

After checking that all parts fit together perfectly it can be assembled permanently with glue.

Parts may change a little as product is allways being upgraded, any doubts contact us.

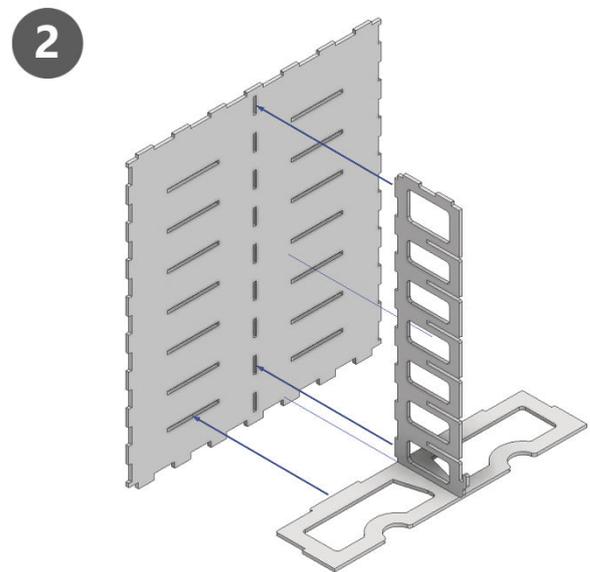

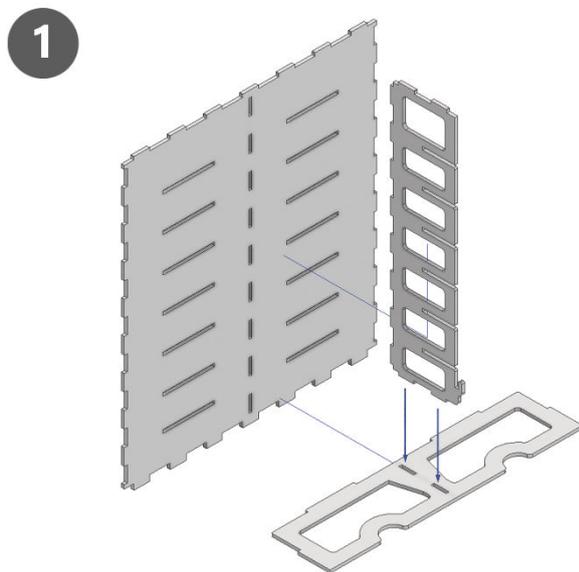

Handle Assembly

Glue booth parts of the handle, align and keep it under pressure for at least 30 minutes.

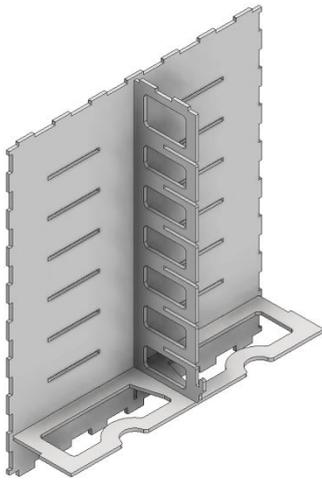

Main Body Assembly

Please note the order of the assembly and the orientation of the parts

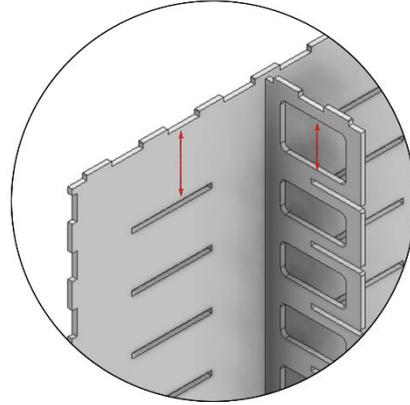

3

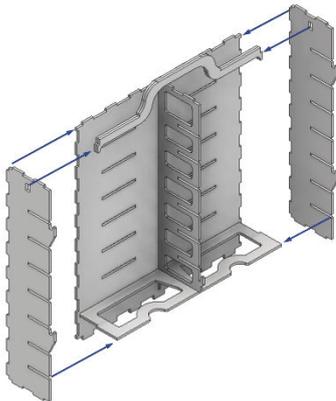

4

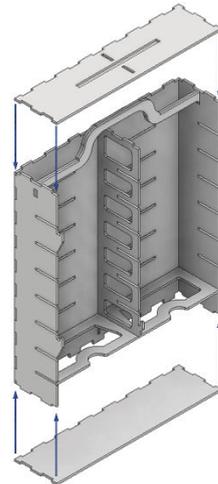

Match longer marked areas upward

5

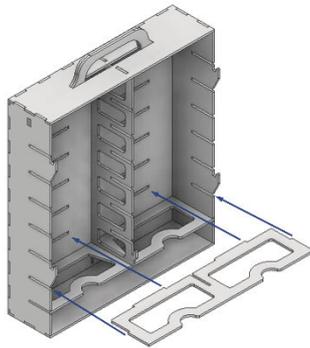

6

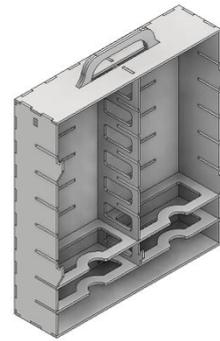

Note: Don't forget to place the Handle in this step.

7

8

On this last step the entire box needs to be clamped while the glue hardens.
During this step the part should be monitored and adjusted to be square and flat as needed.
